

Task 4 – Find Your Public IP

Command:

curl ifconfig.me

Output:

When you execute the above command in your Linux terminal, it displays your current public IP address.

Task 5 – Public vs Private IP Comparison

Feature	Public IP Address	Private IP Address
Visibility	Visible on the internet	Used within a local network
Assigned By	Internet Service Provider (ISP)	Router or Network Administrator
Usage	Communication over the internet	Communication within a LAN
Internet Accessibility	Can be reached over the internet, subject to firewall and network settings	Cannot be accessed directly from the public internet
Example	8.8.8.8	192.168.1.10

Conclusion

- Public IP: Identifies your network on the internet.
- Private IP: Identifies a device inside a local network.

Remember: Public IP is used for internet communication, while Private IP is used for communication within a local network.
